

Powering Progress:

The Babel – Webre 500kV Line Project

A Stronger Grid. A Stronger Louisiana.

Entergy Louisiana is advancing the Babel – Webre 500kV transmission line, a more than one billion dollar investment in our state's energy future. This 150-mile line will run from southeast Texas to Rosedale, Louisiana, creating a new high-voltage east-west path to reliably serve our growing communities and industries.

Why This Project Matters:

As Louisiana experiences significant industrial and population growth, particularly between Baton Rouge and New Orleans, our energy infrastructure must keep pace. Babel – Webre will support major new customers. Together, these projects represent over 3,300MW of new load, creating jobs, tax revenue, and long-term economic opportunity.

Customer and Community Benefits:

- Reliable and resilient power for existing and future customers.
- Support for economic development and job creation in Louisiana.
- Storm-hardened infrastructure, designed to withstand extreme weather.
- Faster interconnection of clean energy and new generation sources.
- Avoidance of more costly, complex upgrades to over a dozen existing transmission lines.

Timeline Highlights:

- Route study completed.
- Construction begins: Early 2027.
- In-service date: August 2029.

Babel – Webre ensures Entergy Louisiana helps keep our communities resilient and ready for the future.
